

BIDPOINT

BUSINESS SOLUTIONS

What We Handle

BIDPOINT'S WASTEPARTNER expertise, technical capabilities and industry relationships, afford us the ability to process a wide variety of hazardous & non-hazardous waste materials for a variety of industries. We work hand-in-hand with defense, construction, industrial, chemical, pharmaceutical, medical, and consumer package goods companies providing hazardous waste disposal services and processing the waste streams their operations generate, including:

Contaminated Soil	Consumer Commodities
Dredged Material	Electronic & Universal Waste
Construction Debris	University Waste
Hazardous Waste	Coal Combustion Products
Non-Hazardous Waste	Medical Waste
Aerosol Cans	

How We Do It

BIDPOINT'S WASTEPARTNER offers tailored waste disposal systems and programs for your business, in which challenges are faced each day. BIDPOINT'S WASTEPARTNER will consult with you to identify the proper disposal needs of your facility by conducting a walk through audit of each location or specifically respond to those needs you identify. Then, we will create a compliant waste program for hazardous, universal, recyclable and regulated wastes offsite specifically customized for you. Maintaining your facility compliance requires routine management of offsite wastes, regular facility inspections, satellite accumulation areas in strategic locations, and temporary storage within each facility to remain in compliance. BIDPOINT'S WASTEPARTNER will keep you in compliance.

Why BIDPOINT

Our approach has always been to provide faster, smarter, greener solutions for our clients and stakeholders. So it's no surprise that we have found other innovative ways to recycle and reuse hazardous waste, pioneering new frontiers of chemical waste disposal. We employ cutting-edge techniques to reduce environmental impact, such as capturing flammable liquids and blending them into a fuel source that cement kilns can use as a cleaner burning alternative to coal.

Service & Solutions

<h3>Disposal & Reuse</h3> <p>Our experienced team will develop the most cost-effective treatment and disposal plan for your project.</p>	<h3>Treatment Technologies</h3> <p>From light contamination to highly hazardous, our array of proven treatment technologies are customized for your project needs.</p>
